University Project

Jot Bikes – Rental Management System **Mar 2025 – Jun 2025**
Kent Institute, Sydney

Objective: To automate rental and sales operations for an e-bike retailer through a Business Process Automation (BPA) system.

Tools: Developed using HTML5, CSS3, JavaScript, and MongoDB, managed via GitHub

Duties:
- Designed the UI/ UX framework by translating business requirements into logical wireframes for Admin, User and Vendor modules.
- Collaborated in a team environment to ensure data accuracy and system reliability.
- Ensured system accessibility and responsiveness.
- Planned content flow to improve user engagement and conversion.

Outcome:
- Delivered a functional, secure system that automated inventory tracking and rental agreements.
- Authored the Software Requirements Specification (SRS) Report and presented the final solution to stakeholders.

Result: Obtained a High Distinction

Employment History

Software Developer Intern **Jul 2026 – Present**

YoungLogix Pty Ltd, Sydney

- Developing and maintaining custom Odoo 19 ERP modules in Python and XML for equipment maintenance, inventory and internal workflow automation
- Building equipment logging, maintenance scheduling and inspection checklists by integrating the survey framework into the maintenance workflow
- Implementing document handling for equipment manuals and standard operating procedures, including automatic matching and duplicate detection
- Extending the web client with JavaScript and SCSS for custom tabs, keyword search chips and inline file previews
- Contributing over 190 commits across feature branches and pull requests within a team of eight developers

Nail Artist **Apr 2023 - Present**

USA Nail Bellevue Hill, Sydney

- Delivering personalized consultations by gathering client requirements, analyzing their needs, and proposing customized solutions to improve overall user experience.
- Efficiently managing a tight appointment schedule to meet daily service targets and business deadlines
- Supporting a team of 15 by maintaining high service standards and contributing to smooth operations during peak hours periods, assisting in managing up to 20 customers at a time

Crew Trainer **Apr 2017 – Jan 2022**

McDonald's, Sydney

- Spearheaded the onboarding and technical training for new team members to ensure 100% compliance with operational system procedures
- Coordinated floor activities with a team of 5 during peak periods to consistently meet strict time-based service targets and business goals
- Monitored real-time production workflows to ensure all outputs met best-practice standards and quality benchmarks, supporting daily product revenue of approximately $10,000

Personal Attributes

- Honed analytical problem-solving and collaboration skills by translating business requirements into a functional UI/UX framework and MongDB database for a rental system.
- Developed time management and organizational skills by managing a busy schedule of part time job while successfully completing a Bachelor of Information Technology.
